PREFACE

Why a book about cylinders? About 15 years ago my father-in-law had a problem with his fuel tank. The fuel gauge did not work properly. He had to measure the amount of fuel in the tank with a dip-stick. As this was not an accurate way to determine the amount of fuel in the tank he asked me if I knew a way to calculate the fuel volume.

After a while I came up with a formula which proved to be correct. When he filled his tank using my calibrated dip-stick, he found that the volumes calculated were correct. A few months ago I was thinking that a book with the calculations already done could be useful for people who need to calculate the volume of a cylindrical segment.

In this book I am calculating the volume of a cylindrical segment of a HORIZONTAL CYLINDER of length l and radius R . I assume the cylinder being perfectly cylindrical.

I used following formula to do the calculation:

$$V \text{ segment} = ((\pi * R * R * \text{angle} / 360) - (0.5 * R * R * \sin \text{angle})) / (\pi * R * R / \text{volume cylinder in litre})$$

(this is the simplified version of the original formula)

All measurements are metric, the radius, length and depth being in centimetre and the resulting volume in litre.

PREFACE TO THE SECOND EDITION

This edition contains the same information as my first book but I added 725 smaller cylinders in order to have a larger choice of the most common cylinder dimensions.

In appendix A I added some information on the formula used to calculate the segments.

For each cylinder I added the percentage of the liquid volume and the air volume corresponding to each liquid level.

In appendix D a simple method to determine the maximum cylinder volume in a right square prism.

Readers who are interested in cylinders which are not in this book, or who want more information, please contact me.
